

*Flat Panel Monitors: In the Area Marker Menu what is the difference between Marker, Select and Safety, and R-Marker, R-Aspect and R Safety, respectively. In other words, what does the "R" prefix mean?*

The "R" settings designate an alternate set of markers that can be invoked with the "MAKE" trigger remote control. This allows you to have one type of marker (non-R) with the trigger OPEN and another marker (R) when the trigger is CLOSED.
