

GY-HC500/550: Is it possible to synchronize the time code of a GY-HC500 with another camera?

Yes. This camera is equipped with a time code input/output (TC) terminal. To synchronize time code with another camera, connect the other camera (master device) with this camera via the TC connections. Then, in the menu of each camera, select "Free Run(Ext)". When the time code is synchronized, the "L" icon will light up in the viewfinder screen.

The built-in time code generator will continue operation even when the master device is disconnected after synchronization.
