

GY-HC900 2/3-inch: What is the proper and safe procedure for cleaning the camera and lens?

It is generally recommended to clean the camera with a dry cloth. Use of solvents and cleaning fluids is not recommended. Wipe the external cabinet of the unit with a soft cloth. Do not wipe the body with benzene or thinner. Doing so may cause the surface to melt or turn cloudy. When it is extremely dirty, soak the cloth in a solution of neutral detergent, wipe the body with it--but not the lens or LCD screen--and then use a clean cloth to remove the detergent from the camera body. To clean the lens, use a recommended lens cleaning tissue and lens cleaning solution.

Unique solution ID: #1397
