

*IP Security Products: May I please have a list of compatible IP cameras that work with the VR-N900U. I am specifically interested in a hybrid unit that will accept the IQ Invision 755, 753, 752 and 511 models. Your prompt help is appreciated.*

VR-N900U unit will work with all IQ Invision cameras. Please download XProtect Device Pack v 3.1 from Milestone USA site (<http://www.milestonesys.com/Downloads>) and install it using the procedure describe in the user manual. After reboot, VR-N900U will provide support for IQ Invision cameras. Please be advice these cameras should be manually added to the system (discovery mode do not work for IQ Invision cameras). Please follow the instructions how to add camera manually.

The system integrator/end user should carefully plan the storage and the bandwidth required by the megapixel camera in order to void any problems with storage or network traffic.
