

*GY-HD200/250U: I have GY-HD251E(PAL) & GY-HD100(NTSC) cameras.  
and I shoot in the 720/24P format with these two cameras together. In post production, can i edit the footage from these different two cameras together?*

The GY-HD100U(NTSC) and the GY-HD251E(PAL) when operated at 24P, record footage in exactly the same format. You can edit their footage together in post.
