

*GY-HD200/250U: We are going to buy a 250 model and were hoping to feed an AJA I/O box 24 p via the HD SDI output of the 250. Is the output flagging the signal at 24p like that which is recorded to DVCPProHD footage?*

Yes, the GY-HD250 flags the active frames the same way that Panasonic does it, via "Varicam Flags" in the HD-SDI output.
